

AI Driven Industrial Equipment Product Life Cycle Boosting Agility, Sustainability and Resilience

The logo for the AIDEAS project, featuring the letters A, I, D, E, A, S in a stylized, blocky font. The 'A' and 'I' are orange, while the 'D', 'E', 'A', and 'S' are blue. The 'D' and 'S' have a unique, rounded, semi-circular shape.

“AI for a more sustainable and circular
EU Manufacturing and Process Industry”

**AI in Machinery Industry and the AIDEAS
project**

Centre for Research and Technology Hellas (CERTH)

Co-funded by
the European Union

AI Driven Industrial Equipment Product Life Cycle Boosting Agility, Sustainability and Resilience

Topic: HORIZON-CL4-2021-TWIN-TRANSITION-01-07 - Artificial Intelligence for sustainable, agile manufacturing (AI, Data and Robotics – Made in Europe Partnerships) (IA)

Partners: 16

EU funding: € 5 999 694

Total cost: € 6 610 338,75

Starting date: 1 October 2022

Project duration: 36 months

Coordinated by: ETHNIKO KENTRO EREVNAS KAI TECHNOLOGIKIS ANAPTYXIS - CERTH

Cordis website: <https://cordis.europa.eu/project/id/101057294>

Project Information

AIDEAS

Grant agreement ID: 101057294

DOI

[10.3030/101057294](https://doi.org/10.3030/101057294)

Start date

1 October 2022

End date

30 September 2025

Funded under

Digital, Industry and Space

Total cost

€ 6 610 338,75

EU contribution

€ 5 999 694

Coordinated by

- **AIDEAS** will develop **AI technologies** for supporting the **entire lifecycle** (design, manufacturing, use, and repair/reuse/recycle) of **industrial equipment** as a strategic instrument to improve **sustainability, agility and resilience** of the **European machinery manufacturing companies**.

AIDEAS Project will deploy 4 integrated **AIDEAS** Suites and 1 **AIDEAS** Machine Passport as Key Exploitable Results:

The 4 **AIDEAS** Suites are composed by **15 AIDEAS Solutions**, which aim to improve a set of Key Performance Indicators (KPIs), linked with the **AIDEAS** specific objectives.

To optimise the industrial equipment design with AI-assisted tools that generate product design suggestions for the optimal construction of machines, allowing companies to reduce waste and to increase the ability to respond to the changing needs of customers (resilience).

AIDEAS Machine Design Optimiser | AI^{MDO}

Toolkit to assist designers to optimally define the key design parameters in multiphysical systems, enhancing machine performance as required for each scenario, through AI.

AIDEAS Machine Synthetic Data Generator | AI^{MDG}

Toolkit for synthesising large high-quality datasets by simulations for the analysis of the machine design and for the training of the optimisation algorithms that will propose optimal design parameters.

AIDEAS CAx Addon | AI^{CAx}

Set of APIs and UIs supporting the integration of AI-assisted optimisation modules into CAx systems.

To increase agility by operating in a predictable manner, even in the face of extreme complexity, with product delivery schedules predicted much more accurately to get much faster to market.

AIDEAS Procurement Optimiser | AI^{PO}

Toolkit for optimising the inventory and purchase of materials and components that are required to build a machine, and meet customer delivery dates using AI.

AIDEAS Fabrication Optimiser | AI^{FO}

Toolkit for optimising production scheduling and resource allocation by predicting production and set-up times, operations dependencies, etc. allowing a near real time response to environment changes like machine breakdowns, last minute customer orders and raw materials delays, through AI.

AIDEAS Delivery Optimiser | AI^{DO}

AI-based toolkit that is capable of optimising the storage and delivery of products. This optimisation will target storage space, storage conditions and product transportation. Additionally, this optimiser will provide optimisation for logistics scheduling and planning.

To guarantee the proper industrial equipment installation and initial calibration, the fast machinery condition evaluation and anomaly detection combined with the adaptive control of industrial equipment, and to support the product quality guarantee and zero defects.

AIDEAS Machine Calibrator | AI^{MC}

Toolkit for the fast calibration of industrial equipment when installed for the first time in a factory or when a re-calibration is needed. It uses AI techniques for providing the most well-suited calibration parameters.

AIDEAS Condition Evaluator | AI^{CE}

Toolkit for determining the condition of the machine as a whole or of some of its components when it is in working conditions in the factory where it is being used.

AIDEAS Anomaly Detector | AI^{AD}

Toolkit that will allow detecting anomalies at component-level or of the machine as a whole when it is in working conditions in the factory where it is being used.

AIDEAS Adaptive Controller | AI^{AC}

Toolkit to train models with measurement data and then train machine controllers with said models to accommodate the machine condition and requirements.

AIDEAS Quality Assurance | AI^{QA}

Toolkit comprising a set of AI-enabled features for manufactured product quality monitoring.

To support a circular production by AI-based solutions for repairing, reusing and recycling industrial equipment, achieving optimal productivity, recycling vs. downcycling, and optimising residual value of materials.

AIDEAS Prescriptive Maintenance | AI^{PM}

Toolkit for predicting remaining useful life and identifying maintenance requirements with the target of extending the overall machine remaining life.

AIDEAS Smart Retrofitter | AI^{SR}

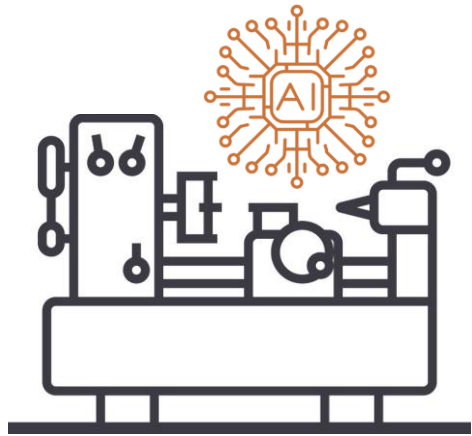

Toolkit for smart retrofitting old machine tools to give them a second life by improving working conditions and product quality, developing a communication system and collaboration, enhancing productivity, efficiency, flexibility, and agility.

AIDEAS LCC/LCA/S-LCA | AI^{LC}

Toolkit that combines AI and Life Cycle methodologies (LCC, LCA, S-LCA) for identifying the best machine end-of-life by devising a multi-objective optimisation strategy to strike a balance between economic, social and environmental benefits.

AIDEAS Disassembler | AI^{DIS}

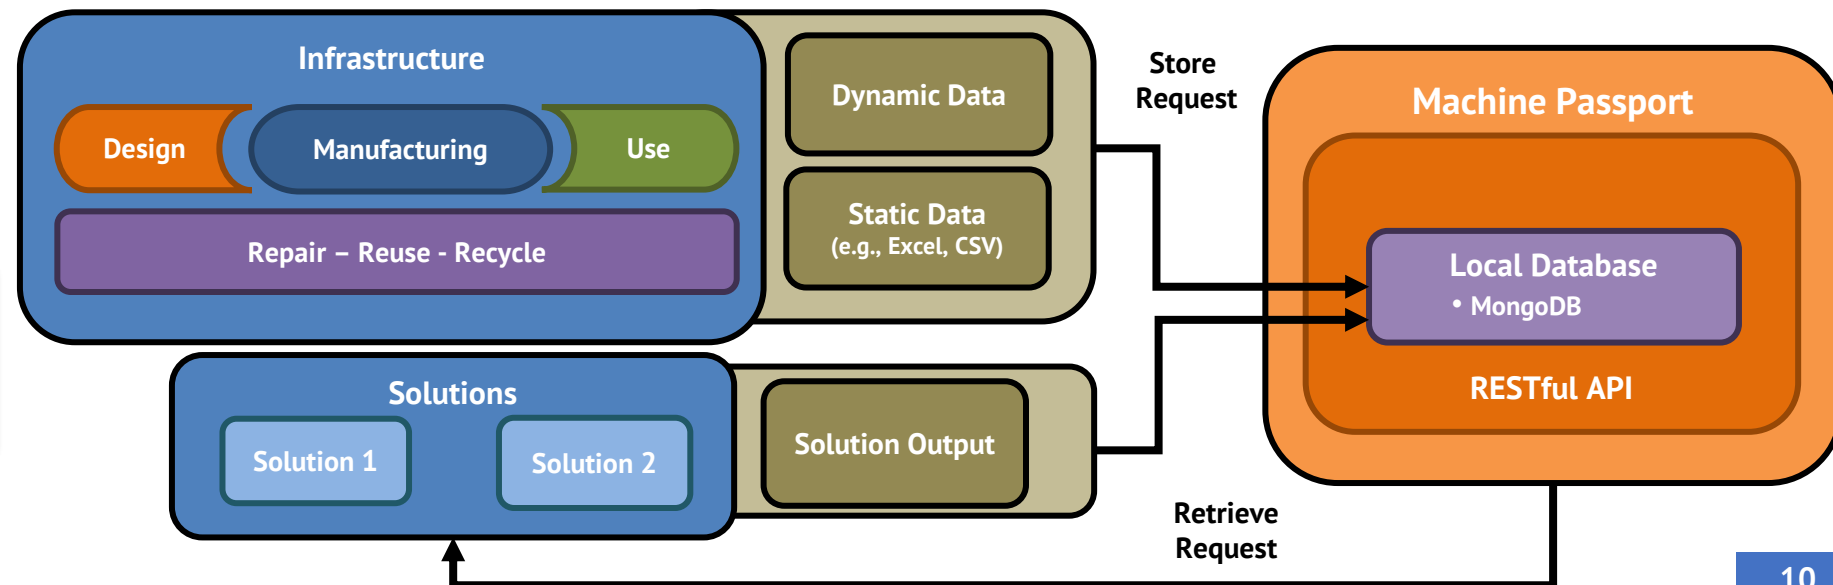

AI based toolkit for modelling the disassembly/recycle processes to help streamline the infrastructure needed to circulate materials focusing around the ability for AI algorithms to recognise and identify objects using cameras and other sensors.

AIDEAS Machine Passport | AI^{MP}

Smart platform for multi-source large-scale data acquisition, management and sharing among different devices regarding:

- **Design** phase of the industrial equipment, providing suggestions for the optimal construction of industrial machinery.
- **Manufacturing** phase of the industrial equipment, supporting the manufacturing parties in the supply chain (supplier, manufacturer and customer).
- **Use** phase of the industrial equipment, allowing CNC optimal calibration parameters, data concerning the stable functionality of the machine components along with those concerning the manufactured product quality monitoring.
- **Repair-Reuse-Recycle** phase of the industrial equipment, exchanging data between the end-of-life parties in the supply chain (consumers, repair shops and waste management companies).

To provide a high added value to industrial equipment, based on the storage of machine data in all phases of their life cycle.

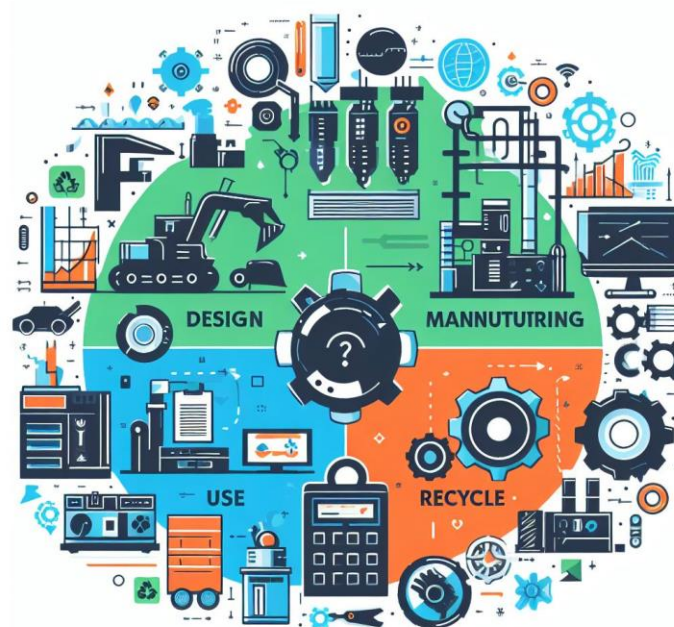

The screenshot displays the AIDEAS Machine Passport interface. On the left, a sidebar contains the following sections and buttons:

- Connectivity**: import
- Visual**: Launch
- UI Customization**: Formation
- Solutions**: Configuration

The main content area features a grid of six empty, light-colored panels. The top right corner of the interface includes the text "Profile Logout" and a small icon.

Functionalities

- Utilities to acquire and store multi-source manufacturing data that are obtained throughout the product life phases
- Preprocessing of the acquired data to ensure the compatibility, interoperability, consistency, and quality of the manufacturing data
- Methods for the provision of manufacturing data
- Definition of the communication protocols and the format of the exchangeable messages
- Development of interfaces for smart trustful data storing, sharing and exchange between different AIDEAS Suites and manufacturing stages in industry
- Provision of knowledge produced from Machine Learning models and Explainable AIs

- The **AIDEAS** Solutions will be demonstrated in 4 Pilots of machinery manufacturers that provide industrial equipment to different industrial sectors: metal, stone, plastic and food.
 - **PAMA SpA** - AI for Machining Centres (metal sector)
 - **D2 Technology** - AI for Cutting Machines (stone sector)
 - **BBM Maschinenbau** - AI for Blow Moulding Machines (plastic sector)
 - **Multiscan Technologies** - AI for Inspection Machines (food sector)
