MERGING PROJECT

MANIPULATION ENHANCEMENT THROUGH ROBOTIC GUIDANCE AND INTELLIGENT NOVEL GRIPPERS

RECENT ADVANCES AND OUTLOOK IN NON-RIGID PARTS MANIPULATION, THE
MERGING APPROACH

Recent advances and outlook in non-rigid parts manipulation, the MERGING approach

Presenter:

Name: **Dionisis ANDRONAS**

Role: Senior researcher and project technical manager

Contact: andronas@lms.mech.upatras.gr

Organization: Laboratory for Manufacturing Systems and Automation (**LMS**)

The MERGING project – consortium

MERGING – Manipulation Enhancement through Robotic Guidance and Intelligent Novel Grippers

- Start: November 2019
- End: October 2023

Presenter and Technical Manager

Dionisis Andronas

Laboratory for Manufacturing systems and Automation (LMS)

Department of Mechanical Engineering and Aeronautics

University of Patras

Patras 26504, GREECE

Email: andronas@lms.mech.upatras.gr

Tel.: +30-2610-910160

<http://www.lms.mech.upatras.gr>

Project Coordinator

Dr.-Ing. Christine Rotinat-Libersa

Interactive Robotics Laboratory

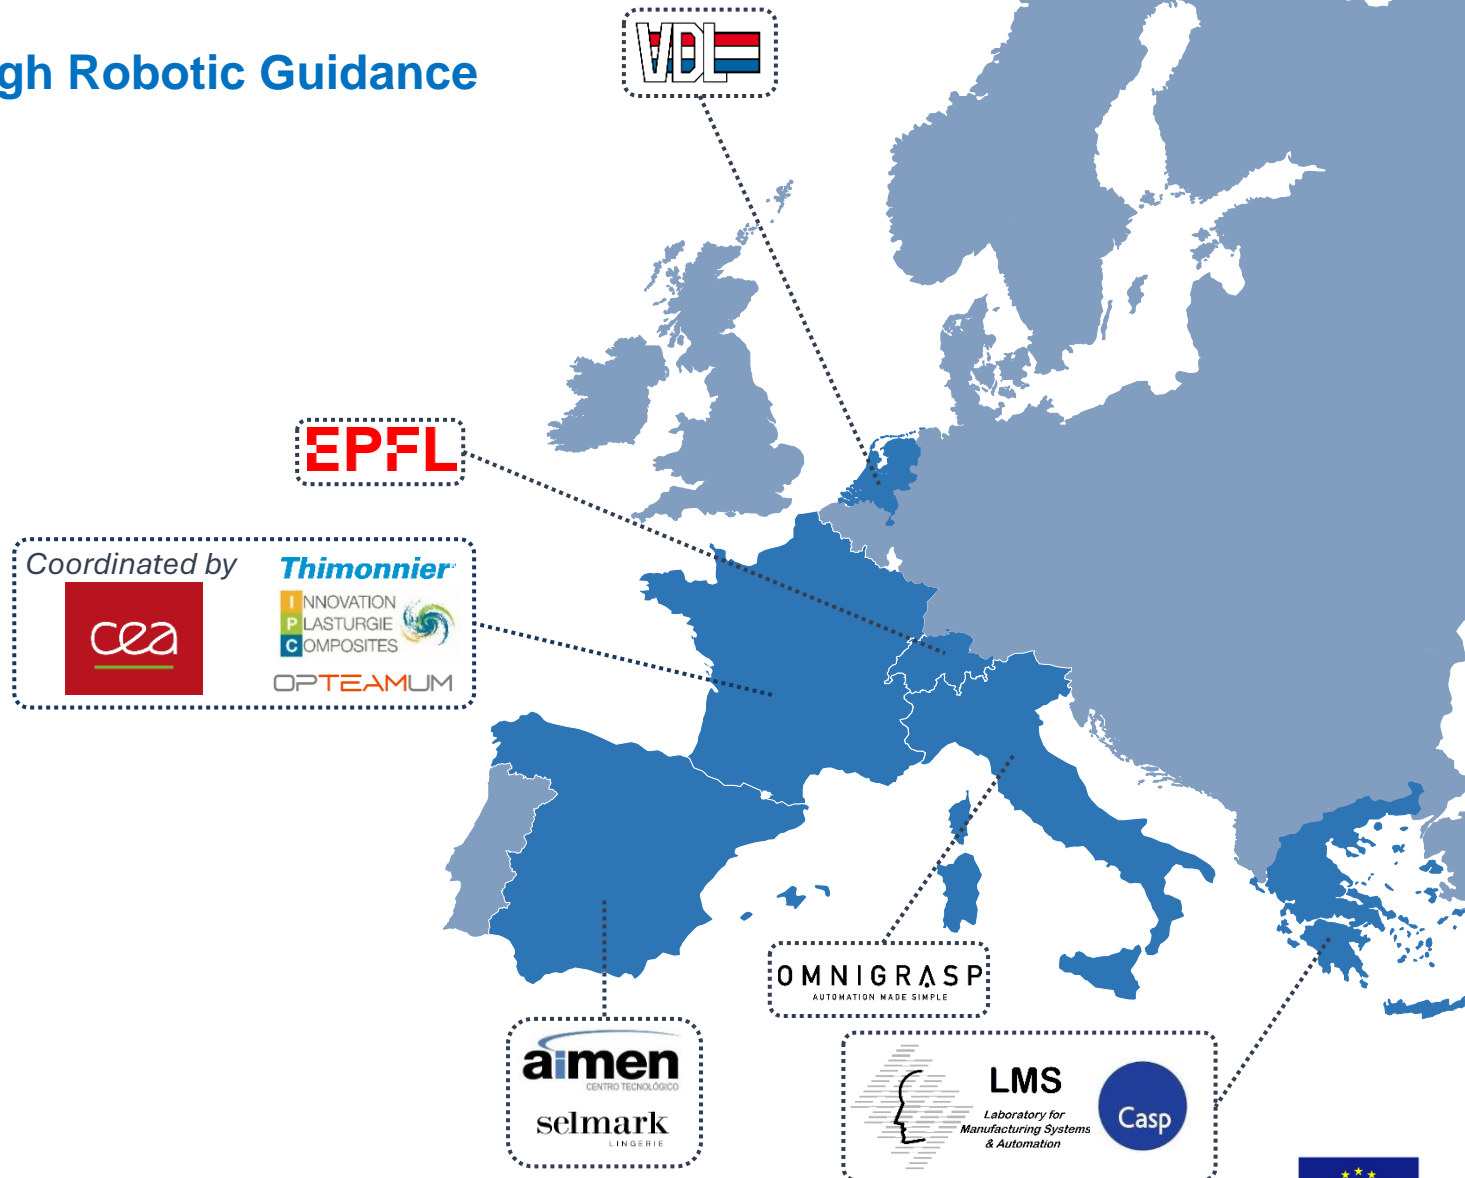

CEA LIST

F-91191 Gif-sur-Yvette Cedex – FRANCE

Email: christine.rotinat-libersa@cea.fr

Tel. : +33 1 69 08 54 66

The MERGING project – objectives

Objectives

- **Objective 1:** Dexterous gripping devices for flexible part manipulation
- **Objective 2:** Multi – level perception system for environment understanding
- **Objective 3:** AI based robot programming and adaptive control
- **Objective 4:** MERGING Workcell control & Supervision

The MERGING project – industrial use cases

Food packaging industry

Thimonnier

Composites for automotive industry

VDL

Textile and garment industry

selmark
LINGERIE

The MERGING project – industrial use cases

Food packaging industry

Use case and industrial challenges

Motivation:

- **Ergonomics and well-being**
 - Poor accessibility at mould areas
 - High repetition of manual work
 - Exposure to chemicals
- **High demand for skilled operators**
 - Process complexity
 - Large size of composite fabrics and core materials

Challenges:

- **Deformation of** on non-rigid parts
- **Reconfiguration** and teaching due to large number of components

Use case and industrial challenges

MERGING hybrid cell for semi-automated composites manufacturing

Robotic manipulator for the semi-automation of material transferring

Composite materials

Mould

Material storage

MERGING hybrid cell for semi-automated composites manufacturing

- Rigid object handling

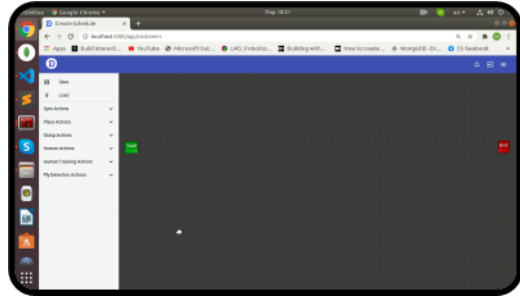

- Non rigid assembly

Solution and enabling technologies

Intuitive scheduling & orchestration tools

Multi-tool end-effector for composites layup

Grasping point detection

Model-based fabric co-manipulation

Deformable object reconstruction

AR HMI for co-manipulation

Enabling technologies

Enabling technologies

✓ Dexterity

Multi-tool end-effector for composites layup

Enabling technologies

☑ Dexterity

☑ Perception

2D vision for grasping point detection

Fine positioning assurance

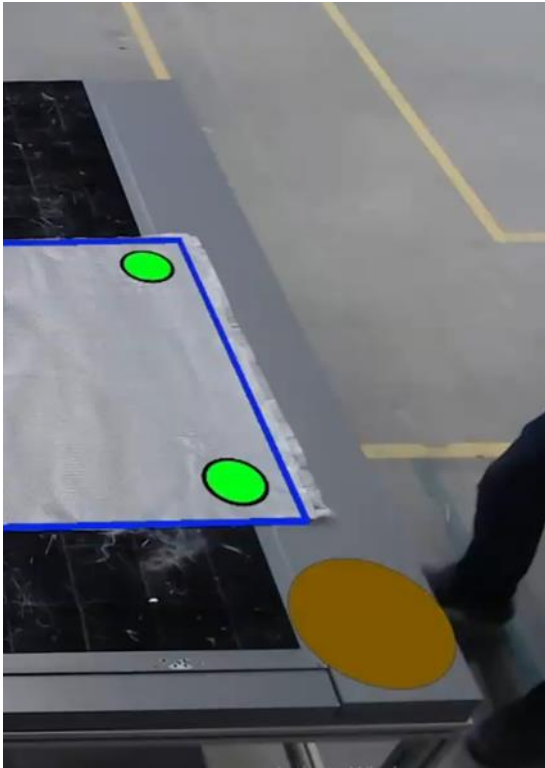

Enabling technologies

- ✓ Dexterity
- ✓ Perception

Stereo camera-based human perception

- *For human system interaction*

- *For human robot collaboration*

- *For safety*

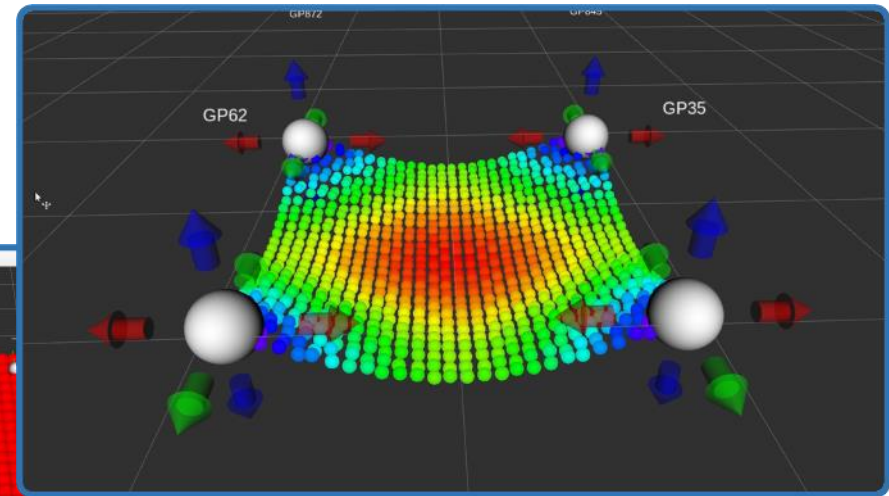

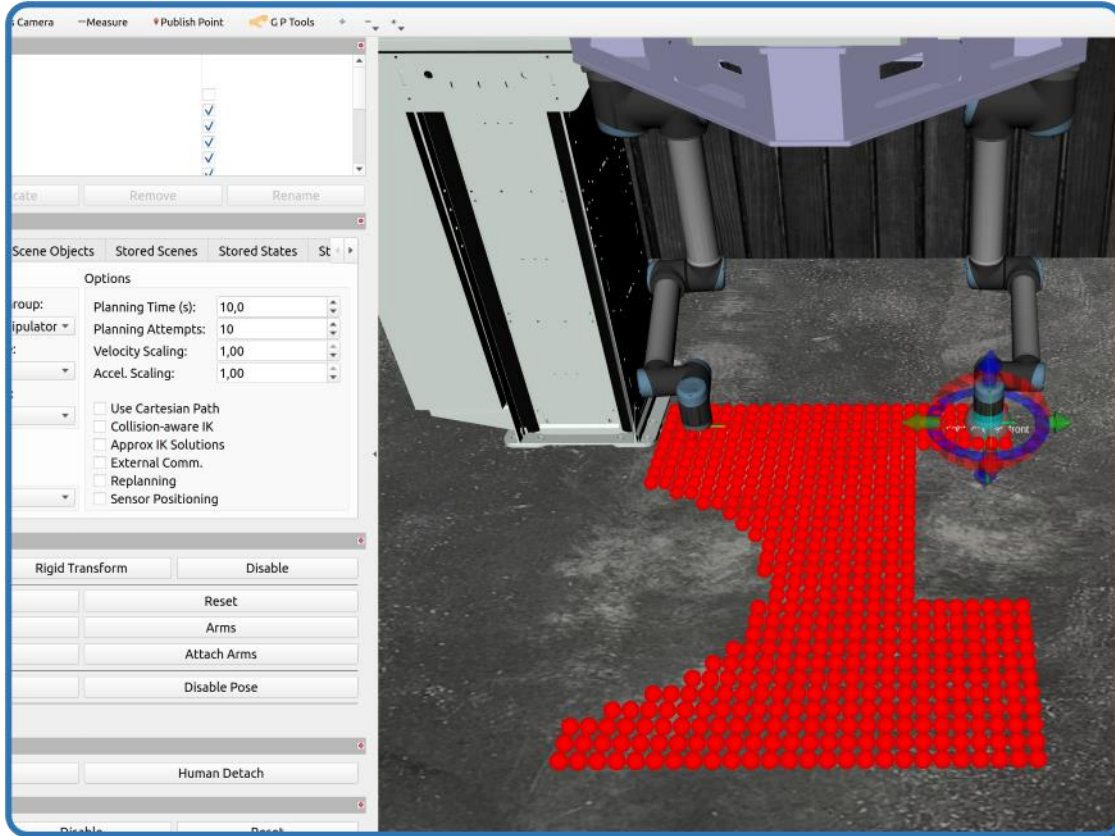

Enabling technologies

- ☑ Dexterity
- ☑ Perception
- ☑ Cognition

Simulation of non-rigid object deformation

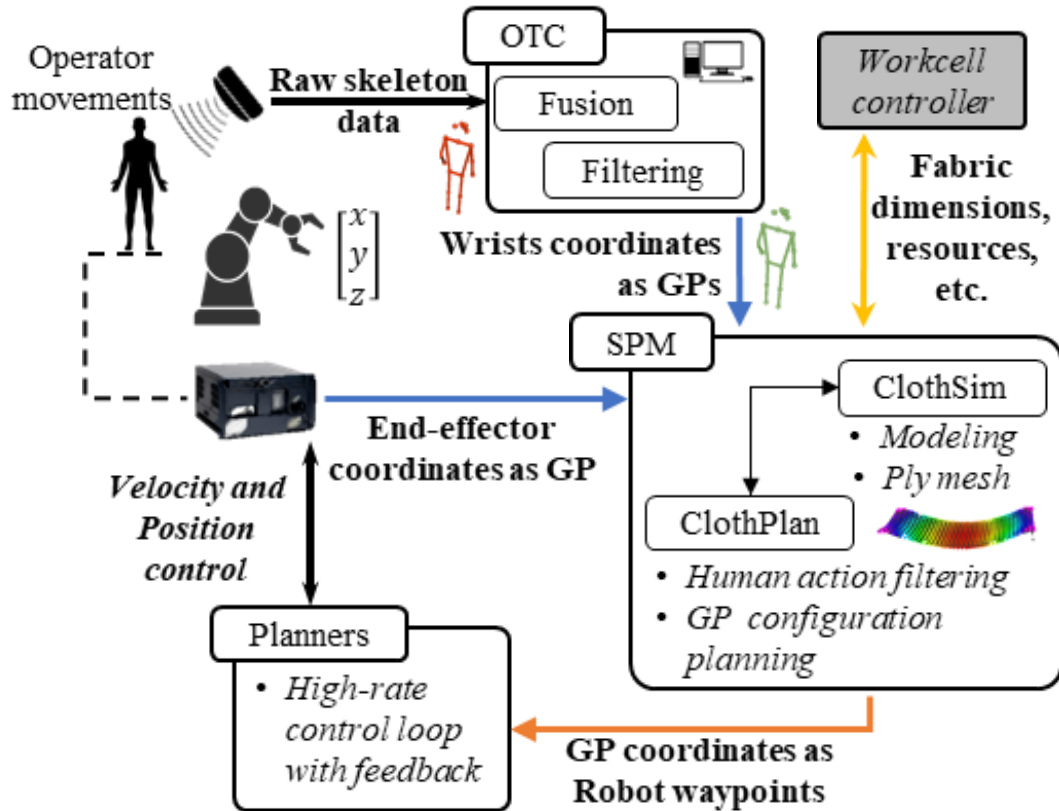

Enabling technologies

- Dexterity
- Perception
- Cognition
- Control

Model-based non-rigid object co-manipulation

Operator Handling Commands

Model based robot control

Supportive Robots' actions

Enabling technologies

- ✓ Dexterity
- ✓ Perception
- ✓ Cognition

- ✓ Control

Model-based non-rigid object co-manipulation

Human dual arm robot model-based fabric co-manipulation

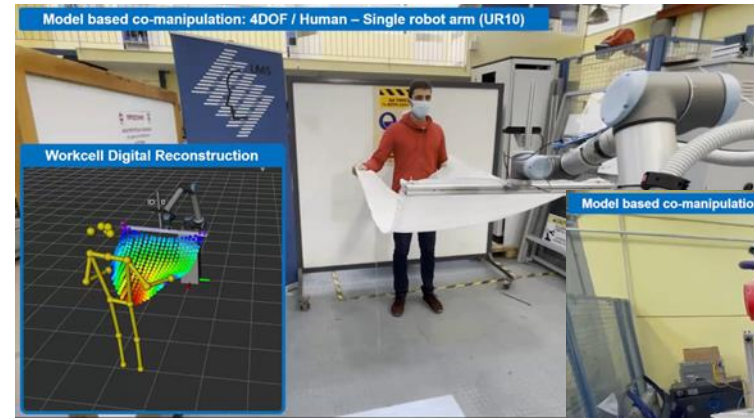

Dual arm with 7th and 8th axis

Human single arm robot model-based fabric co-manipulation

Single arm with 7th and 8th axis

Single arm UR10

Single arm COMAU

Enabling technologies

- ✓ Dexterity
- ✓ Perception
- ✓ Cognition
- ✓ Control

- *Gloves-based closed-loop co-manipulation of fabrics*

- *Co-manipulation of fragile objects*

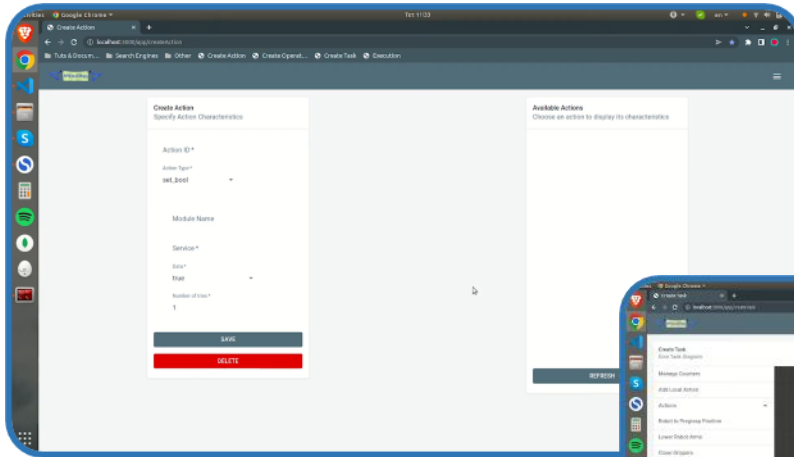

Enabling technologies

- ✓ Dexterity
- ✓ Perception
- ✓ Cognition
- ✓ Control
- ✓ Orchestration

Deformable object Handling Controller

- **Intuitive activity creation**

- **Intuitive manual scheduling**

- **Runtime execution monitoring**

Enabling technologies

- Dexterity
- Perception
- Cognition
- Control
- Orchestration
- Interaction

Stationary AR-based interface

On-robot AR-based interface

Task ID:	H_02
Task Name:	Grasp
Task Description:	Grasp the fiberglass ply using the AR buttons
	
Task Overwrites	
<input type="checkbox"/> Voice Commands	<input type="checkbox"/>
	
 	

- **Operator support**
- **Handling input quality**
- **Co-manipulation instructions**
- **Grasping point designation**
- **Extended reality button interaction**

Task ID:	H_01
Task Description:	Unfold the cloth following the contour shown in blue
Task Name:	Unfold the cloth
	
  	

Human dual arm robot model-based fabric co-manipulation

Robot_1 grasping point
Robot_2 grasping point

Task ID:	Task Description:
H_01	Unfold the cloth following the contour shown in blue
Task Name:	
Unfold the cloth	
LMS Laboratory for Manufacturing Systems & Automation	

Task ID:	H_01
Task Name:	Unfold the cloth
Task Description:	Unfold the cloth following the contour shown in blue
Task Overwrites	<input type="checkbox"/> Voice Commands

Hybrid cell for composites manufacturing

Grant agreement ID: 869963

Results

- **MERGING managed to address use case requirements** by improving
 - Ergonomics
 - Well-being
 - Efficiency

- **Performance is improved by**
 - Parallel execution of tasks by robot and operator
 - Rapid automated material transferring
 - Layup of hard-to-reach areas quite easily

- **End-user and operators expressed**
 - Substantial improvement of ergonomics
 - The manufacturing process becomes less repeatable and interesting
 - Improvement in quality and error minimization

Outlook and future directions

- Non-rigid product manufacturing still presents challenges
 - Future research should focus on improving the maturity level of solutions
 - Dexterity, perception and cognition has potential for improvement
- Machine-learning could improve, yet not replace, aforementioned results
 - Potential for cycle time improvement
 - Proactive planning of multi-agent co-manipulation
- Training is still fundamental for industrial integration
 - Operators need new skills
 - Need for training services
- Industry needs modular solutions
 - Abstracted functionalities
 - Easy to be in-house applied and maintained
 - Data secure
 - Certification
