

BUILDING WITH WOOD TO TRANSFORM OUR CARBON FOOTPRINT

INVITATION TO VISIT KENYA'S FIRST MASS TIMBER PROTOTYPE

Did you know that mass timber offers a superior performance to concrete and steel?

Did you know that charring wood to protect it from the elements is an old-japanese technique called Yakisugi?

Did you know the potential of mass timber to transform the carbon footprint of the construction industry at a global scale?

If these are some of the questions that you are curious about, then join us for pre-public launch guided tours at our mass timber exhibition. The exhibition space is a demonstration of the use of mass timber.

Come and learn what BuildX is doing to catalyse change in the sector, the partnerships we are developing across the value chain, the opportunities and benefits adopting mass timber offers to people, planet and developers alike.
