

Pongsak (Kim) Luarnghindarat – Sustainable Business Development Manager at BIG has over 15 years of experience in clean energy business and climate technology

Growing up in Bangkok, the Capital City of Thailand, Kim has seen many negative changes in the city which are the results of climate changes. This leads to his strong intention to contribute in helping Thailand to reduce greenhouse gas emissions to avoid further negative impacts from climate change.

Kim is a business developer in climate technology industry specializing in hydrogen value chain. Gaining experiences from succeeding in driving multi scale projects including the remarkable of the first LNG cold energy utilization for air separation unit in South East Asia, Kim can leverage experiences, technical knowledge, and networking to contribute Thailand driving for sustainability and reaching national carbon neutrality and net zero target.

Kim holds a Master of Engineering Management from California State University at Northridge, USA., and a Bachelor of Chemical Engineering from Chulalongkorn University, Thailand. His previous expertise includes 35 tons/day H₂ production facilities, H₂ for Mobility use case in Thailand, and General Manager of a JV company of BIG with National Conglomerate Oil and Gas Company in Thailand.
