

SILA Technical Seminar

Creating attractive places by lighting up Trees

Date/ Time : 7th July 2021 6:00- 6:45pm

SILA CPD : 1 point

Synopsis:

In landscape architecture, trees are important elements for designing spaces and enabling orientation. If properly lit, they can perform these tasks even at night. Illuminated trees form visual axes in the dark and convey a sense of security. Because the shape and size of the tree crown varies according to the type of tree and season of the year, choosing the right lighting tool is not always simple. We offer helpful tips for the lighting design, and show you how to impressively illuminate various types of trees and palms.

By attending this seminar, you will learn how to light up the trees with appropriate light fitting and light sources.

About Speaker :

Mr. Luis Barahona, Technical Manager and Head of Lighting Design for ERCO Asia Pacific headquarters office in Singapore. Ecuador-born and Germany-educated, he is fluent in Spanish, German, and English. He holds a bachelor's degree in Architecture from the University of Mainz, Germany. Prior to his career at ERCO, he was working as an architect in Berlin for more than 14 years. He joined ERCO in Germany in 2001. After the initial training program, he started as an Erasmus Trainer for Central Europe and advising lighting design solutions for specific projects in the Asia Pacific and the Middle East.
